ABSTRACT

A good maintenance always has been the key for less fleet operation costs. The Maintenance Evolution in the world, so some years ago the Preventive / Proactive Maintenance concept began to grow.

The oil, in the machine, runs through the entire compartment, pushing out all the useful information to know the health of each system component.

Maintaining machines is one of your top priorities at the Mine Industry. As Machine availability is so important for Mine production, the Mine is the Application with highest requirements of the Industry. How can we use this information from an oil analysis to a powerful Maintenance Tool? This is the key from a Good to a Great Maintenance.
